

UPDATE OF GENERAL CONDITION AND REQUIREMENT

3.5 – ADJUSTMENT OF QUANTITY

General Condition and Requirement 3.5 – Adjustment of Quantity, is the contractual guidance used to handle modifications to the contract where there was an initial error in volume estimation. While this specification has proven adequate, it was suggested that some ‘word smithing’ might improve the clarity. Therefore, without any adjustment to the content or meaning, and with the approval of Chief Boyd, a new version (05/03/2007) of the specification has been created. This new version will now be included in all General Conditions and Requirements that are attached to all State Forest Timber Sale Contracts.

For all contracts advertised after 05/03/2007, the 05/03/2007 version of the General Conditions and Requirements will be used. For all contract advertised previously, the 09/12/2006 version will be used.

CURRENT VERSION (02/28/2004)

3.5 - Adjustment of Quantity. Estimated quantities in this contract may be revised by correcting errors due to computer input, miscalculation, computer malfunction or area determination. These adjustments will only be made for errors that result in a reduction in total sale value of at least 10 percent or \$1,000, whichever is less. Adjustment in quantities shall not obligate the DNR to designate additional quantities when the original quantity estimate is overstated. No adjustments in quantity shall be made for variations in accuracy resulting from planned sampling and measuring methods or judgments of timber quality or defect. No adjustment in price will be made.

NEW VERSION (05/03/2007)

3.5 - Adjustment of Quantity. No adjustments in quantity shall be made for variations in accuracy resulting from planned sampling and measuring methods or judgments of timber quality or defect.

In the case of errors as a result of computer input, mistakes in calculation, computer malfunction or area determination, estimated quantities in this contract may be revised to correct the discrepancy. These adjustments will only be made for errors that result in a reduction in total sale value of at least 10 percent or \$1,000, whichever is less. Adjustment in quantities shall not obligate the DNR to designate additional quantities when the original quantity estimate is overstated. No adjustment in species/product unit price will be made.
